# Description

I am so busy with so many things I don't know how to transfer or sell the things I don't need easily to people in need. There is a page for selling items on <https://craigslist.org/>, but it still needs to describe in the text. I want to put the item on the shelf quickly without thinking about promoting it.

I hope to make the MVP of this platform based on ease of use, free from deception, and consideration of individual buyers and sellers.

# Features

- User can login with FB.
- User can browse items and set items state.
- User can use mobile to do action.

# Planning - User Stories

- As a guest, I want to login (on login page) , so I can become a seller or buyer
- As a buyer, I want to view an item's seller information(on item page) , so I can contact the seller to buy this item.

# Planning - User Stories

- As a seller, I want to edit my information (on my information page) , so the buyer can view my information and contact me
- As a seller, I want to add a new item with video (on add item page) , so I can show item to buyer.
- As a seller, I want to edit an old item state(on my item list) , so I can make item show or hide from buyer. As a seller, I want to show an old item state(on my item list) , so I can recognize the item situation.

# Planning - Database

- Users
- User\_informations
- Items
- Records

# Technology Stack

- NodeJS
- AdonisJS
- PostgresQL
- Angular
- Ionic
- CcapacitorJS
- AWS EC2 & S3

# Demo

# What I Learned

- Angular
- Capacitorjs
- Rxjs
- Ionic

# What's Next

- Successful Upload Video
- Search & Filter
- Better UI
- Set tags for better classification
